ISO 20022

Target2-Securities – Limit Utilisation Journal

Message Definition Report Part 1

Approved by the Securities SEG on the 16th January 2025 and Payments SEG on the 24th January 2025 under the lead of the Securities SEG.

This document provides information about the use of the candidate messages for Target2-Securities - Limit Utilisation Journal and includes, for example, business transactions and messages flows.

February 2025

Preliminary Note

The Message Definition Report (MDR) is made of three parts:

MDR Part 1

This describes the contextual background required to understand the functionality of the proposed message set. Part 1 is produced by the submitting organization that developed or maintained the message set in line with an MDR Part 1 template provided by the ISO 20022 Registration Authority (RA) on www.iso20022.org.

MDR Part 2

This is the detailed description of each message definition of the message set. Part 2 is produced by the RA using the model developed by the submitting organization.

MDR Part 3

This is an extract if the ISO 20022 Business Model describing the business concepts used in the message set. Part 2 is an Excel document produced by the RA.

1 Introduction

1.1 Terms and Definitions

The following terms are reserved words defined in ISO 20022 Edition 2013 – Part1. When used in this document, the UpperCamelCase notation is followed.

Term	Definition
BusinessRole	Functional role-played by a business actor in a particular BusinessProcess or BusinessTransaction.
Participant	Involvement of a BusinessRole in a BusinessTransaction.
BusinessProcess	Definition of the business activities undertaken by BusinessRoles within a BusinessArea whereby each BusinessProcess fulfils one type of business activity and whereby a BusinessProcess may include and extend other BusinessProcesses.
BusinessTransaction	Particular solution that meets the communication requirements and the interaction requirements of a particular BusinessProcess and BusinessArea.
MessageDefinition	Formal description of the structure of a message instance.

Note When a MessageDefinition or message identifier is specified, it should include the variant and version number. However, in this document (except in the business examples section, if present), variant and version numbers are not included. In order to know the correct variant and version number for a MessageDefinition, the related Message Definition Report Part 2 document should be consulted.

1.2 Abbreviations and Acronyms

The following is a list of abbreviations and acronyms used in the document.

Abbreviation/Acronyms	Definition
4CB	Banca d'Italia, Banque de France, Deutsche Bundesbank and Banco d'España
A2A	Application-to-Application mode. Defines a mode of technical communication that permits the exchange of information between software applications of T2S and a directly connected T2S actor.
BAH/head.001	Business Application Header
BIC	Business Identifier Code
CeBM	Central Bank Money
CSD	Central Securities Depository
ID	Identification
MDR	Message Definition Report
NCB	National Central Bank
RTGS	Real-time gross settlement (RTGS) system. A settlement system in which processing and settlement take place in real-time on a gross basis.

Abbreviation/Acronyms	Definition
SEG	Standards Evaluation Group
T2S	TARGET2-Securities
TM	Technical Message. Messages which cover technical functions within T2S System
U2A	User-to-Application mode. Defines a mode of technical communication that permits the exchange of information between software applications of T2S and a T2S system user through a graphical user interface (GUI).
URD	T2S User Requirement Document
XML	eXtensible Mark-up language

1.3 Document Scope and Objectives

This document is the first part of the Message Definition Report (MDR) that describes the BusinessTransactions and underlying message set. For the sake of completeness, the document may also describe BusinessActivities that are not in the scope of the business processes covered in this document.

This document describes the following:

- the BusinessProcess scope
- the BusinessRoles involved in these BusinessProcesses

The main objectives of this document are as follows:

- to provide information about the messages that support the business processes
- to explain the BusinessProcesses and BusinessActivities these messages have addressed
- to give a high level description of BusinessProcesses and the associated BusinessRoles
- to document the BusinessTransactions
- to provide business examples

The messages definitions are specified in Message Definition Report Part 2.

2 Scope and Functionality

2.1 Background

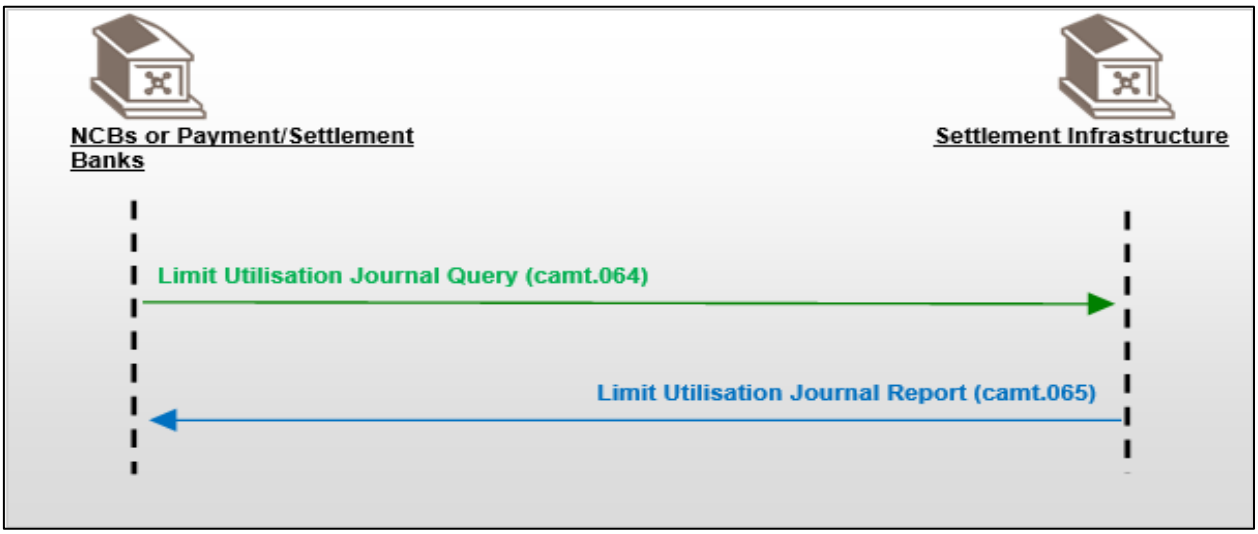

This Message Definition Report covers a set of two MessageDefinitions developed by Banque de France on behalf of 4CB in close collaboration with SWIFT, submitted by Deutsche Bundesbank on behalf of 4CB and Approved by the Securities Standards Evaluation Group (SEG) on the 16th January 2025 and Payments SEG on the 24th January 2025 under the lead of the Securities SEG.

Originally, these messages have been designed to support the T2S community for Limit Utilisation Journal Query and Report. T2S (TARGET2-Securities) is a European securities settlement engine which offers centralised settlement in central bank money across all European securities markets. The fundamental objective of T2S is to integrate and harmonise the highly fragmented securities settlement infrastructure in Europe. It aims to reduce the costs of cross-border securities settlement and increase competition and choice among providers of post-trading services in Europe.

The detailed description of each MessageDefinition is provided in Message Definition Report Part 2.

2.2 Scope

As described in the ISO 20022 Business Justification, The candidate Limit Utilisation Journal Query and Report messages are specifically designed to give the possibility to a NCBs, CSDs, payment and settlement banks to query for all journal activity impacting existing limits defined within a settlement infrastructure, satisfying a set of criteria including limit type, account identification, party identification of the credit consumer, responsible party identification of the credit consumer and dates. The settlement infrastructure, in this case T2S, will report back with the Limit Utilisation Journal Report which will provide the corresponding limit utilisation and related transactions for all journal activity satisfying the query criteria.

Note	These messages are to be used with the ISO 20022 Business Application Header (head.001). The schema and more information about the Business Application Header (BAH) can be found on the www.iso20022.org web site

2.2.1 Groups

Limit Utilisation Journal Query and Report message set consists of:

MessageDefinition	Message Identifier
Limit Utilisation Journal Query	camt.064
Limit Utilisation Journal Report	camt.065

2.2.2 Functionality

The Limit Utilisation Journal Query Report message definitions are specifically designed to support the following technical functions:

1. **Limit Utilisation Journal Query**

A CSD, NCB, payment bank or a directly connected system participant (the central securities depository participant granted direct access, like a bank or a central counterparty) sends the Limit Utilisation Journal Query message (camt.064) to T2S. It is used to request information regarding the journaling of cash limits utilisation (including limit amounts, utilisation and journal of transactions impacting the utilisation of limits) as managed by the credit provider and corresponding to the criteria as defined within the message as the following:

- Mandatory business attributes include:
  - Party identification (party as credit consumer)
  - Responsible party identification (NCB acting as parent and as credit provider or CSD acting as parent of the client)
  - Date (journal activity date)
- Optional business attributes include:
  - Dedicated cash account
  - Limit type:
    - Auto Collateralisation
    - External Guarantee
    - Unsecured Credit

In response to the Limit Utilisation Journal Query T2S sends a Limit Utilisation Journal Report message (camt.065) with the corresponding limit amounts, utilisations and journal activity matching the criteria as defined within the query.

2. **Limit Utilisation Journal Report**

The Limit Utilisation Journal Report message (camt.065) is sent by T2S to CSD, NCB, payment bank or a directly connected system participant (the central securities depository participant granted direct access, like a bank or a central counterparty). It is used to report information regarding the limits (including limit amounts, utilisation and journal of transactions impacting the utilisation of limits) as managed by the credit provider and corresponding to the criteria received within the incoming query message (camt.064).

It includes the following business attributes as output parameters:

- Party identification
- Responsible party identification
- Date
- Dedicated cash account
- Limit type
- Debit/Credit indicator
- Limit currency
- Amount (initial amount of the limit)
- Utilisation amount (utilised amount of the limit)

- Available amount (remaining available headroom of the limit)
- Transaction reference

See Message Definition Report Part 2 for the message and formats.

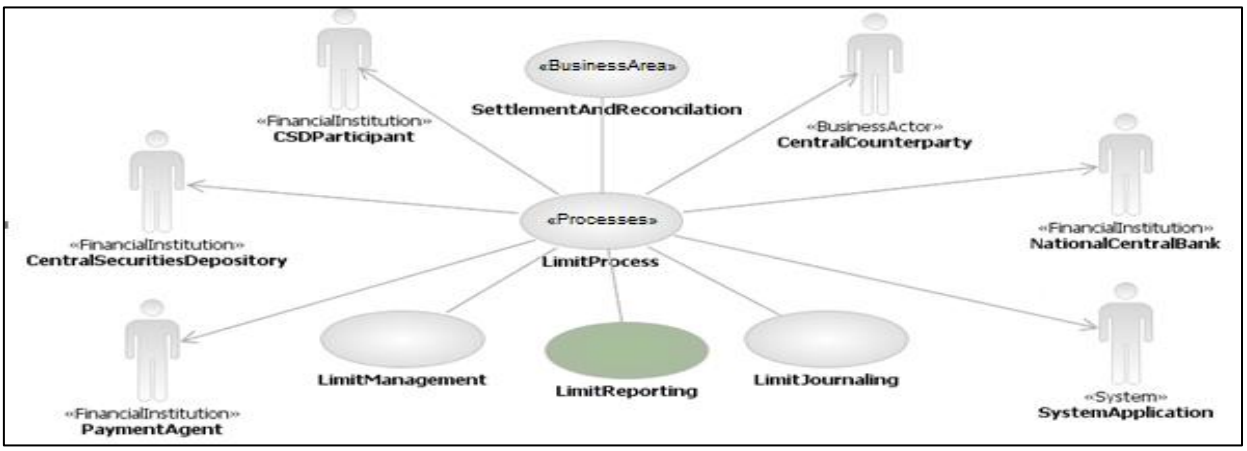

3 BusinessRoles and Participants

A BusinessRole represents an entity (or a class of entities) of the real world, physical or legal, a person, a group of persons, a corporation. Examples of BusinessRoles: “Financial Institution”, “Automated Clearing House”, “Central Securities Depository”.

A Participant is a functional role performed by a BusinessRole in a particular BusinessProcess or BusinessTransaction. Examples of Participants: the “user” of a system, “debtor”, “creditor”, “investor”.

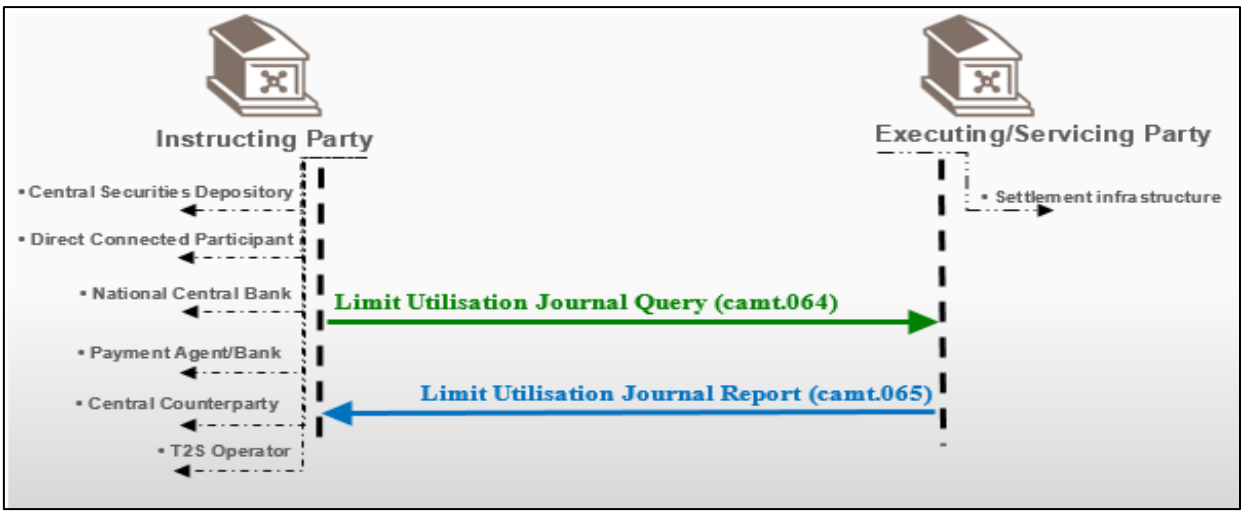

The relationship between BusinessRoles and Participants is many-to-many. One BusinessRole can be involved as different Participants at different moments in time or at the same time. Examples of BusinessRoles: "user", "debtor”, "creditor", "investor". Different BusinessRoles can be involved as the same Participant.

In the context of the Limit Utilisation Journal Query and Report, the high-level BusinessArea, Processes, BusinessRoles and typical Participants can be represented as follows:

The Limit Utilisation Journaling Query and Limit Utilisation Journaling Report only covers the reporting processes in green. The other processes are included for completeness.

Moreover, the Limit Reporting communication flow with the relevant Participants can be represented as follows:

3.1 Participants and BusinessRoles Definitions

Participants

Description	Definition
Instructing Party	Party that instructs the executing/servicing party to process and monitor a transaction.
Executing / Servicing Party	Party that processes, monitors and reports on transactions received from the Instructing party.

Business Roles

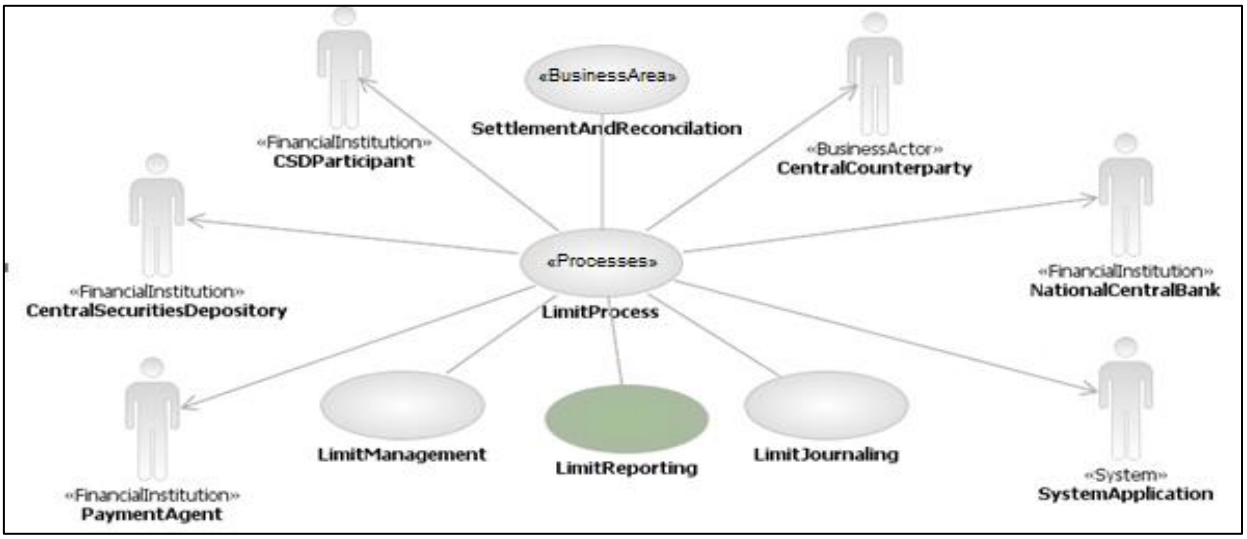

Description	Definition
Settlement Infrastructure	The party that provides services to its members for the settlement of transactions and holding of assets (e.g., T2S, RTGS).
Central Securities Depositories (CSD)	An infrastructure that, holds or controls, the holding of physical or dematerialised financial instruments belonging to all, or a large portion of, the investors in a securities market. This affects the centralised transfer of ownership of such securities by entries on its books and records.
Direct Connected Participant (DCP)	The party, which is not a CSD and that, is directly connected to the Settlement Infrastructure Platform. It could be a local custodian, a global custodian, a stock exchange , a central counterparty, etc.
National Central Bank (NCB)	The principal monetary authority of a nation, a central bank performs several key functions, including issuing currency and regulating the supply of credit in the economy. The NCB role classification shall include all T2S system users of an NCB as a liquidity provider through T2S dedicated cash accounts.
Payment Bank	The payment bank role includes all T2S system users of payment banks that require access to the T2S dedicated cash account balances and postings of the T2S dedicated cash accounts they provide for the purpose of securities settlement.
Central Counterparty	An infrastructure that is very often a component of a clearinghouse, and facilitates clearing and settlement for its members by standing between the buyer and the seller of a trade. It may net transactions, and substitutes itself as settlement counterparty to each position.
T2S Operator	The T2S operator is the top level of the hierarchical role and access rights model. The T2S operator role classification includes all T2S system users of the entity, which will be responsible for the day-to-day operation and management of T2S. The T2S actors managed by this entity shall be CSDs and NCBs participating in T2S. At the highest level, the T2S operator shall have access to all data and functionality in the subordinate level.

3.2 BusinessRoles and Participants Table

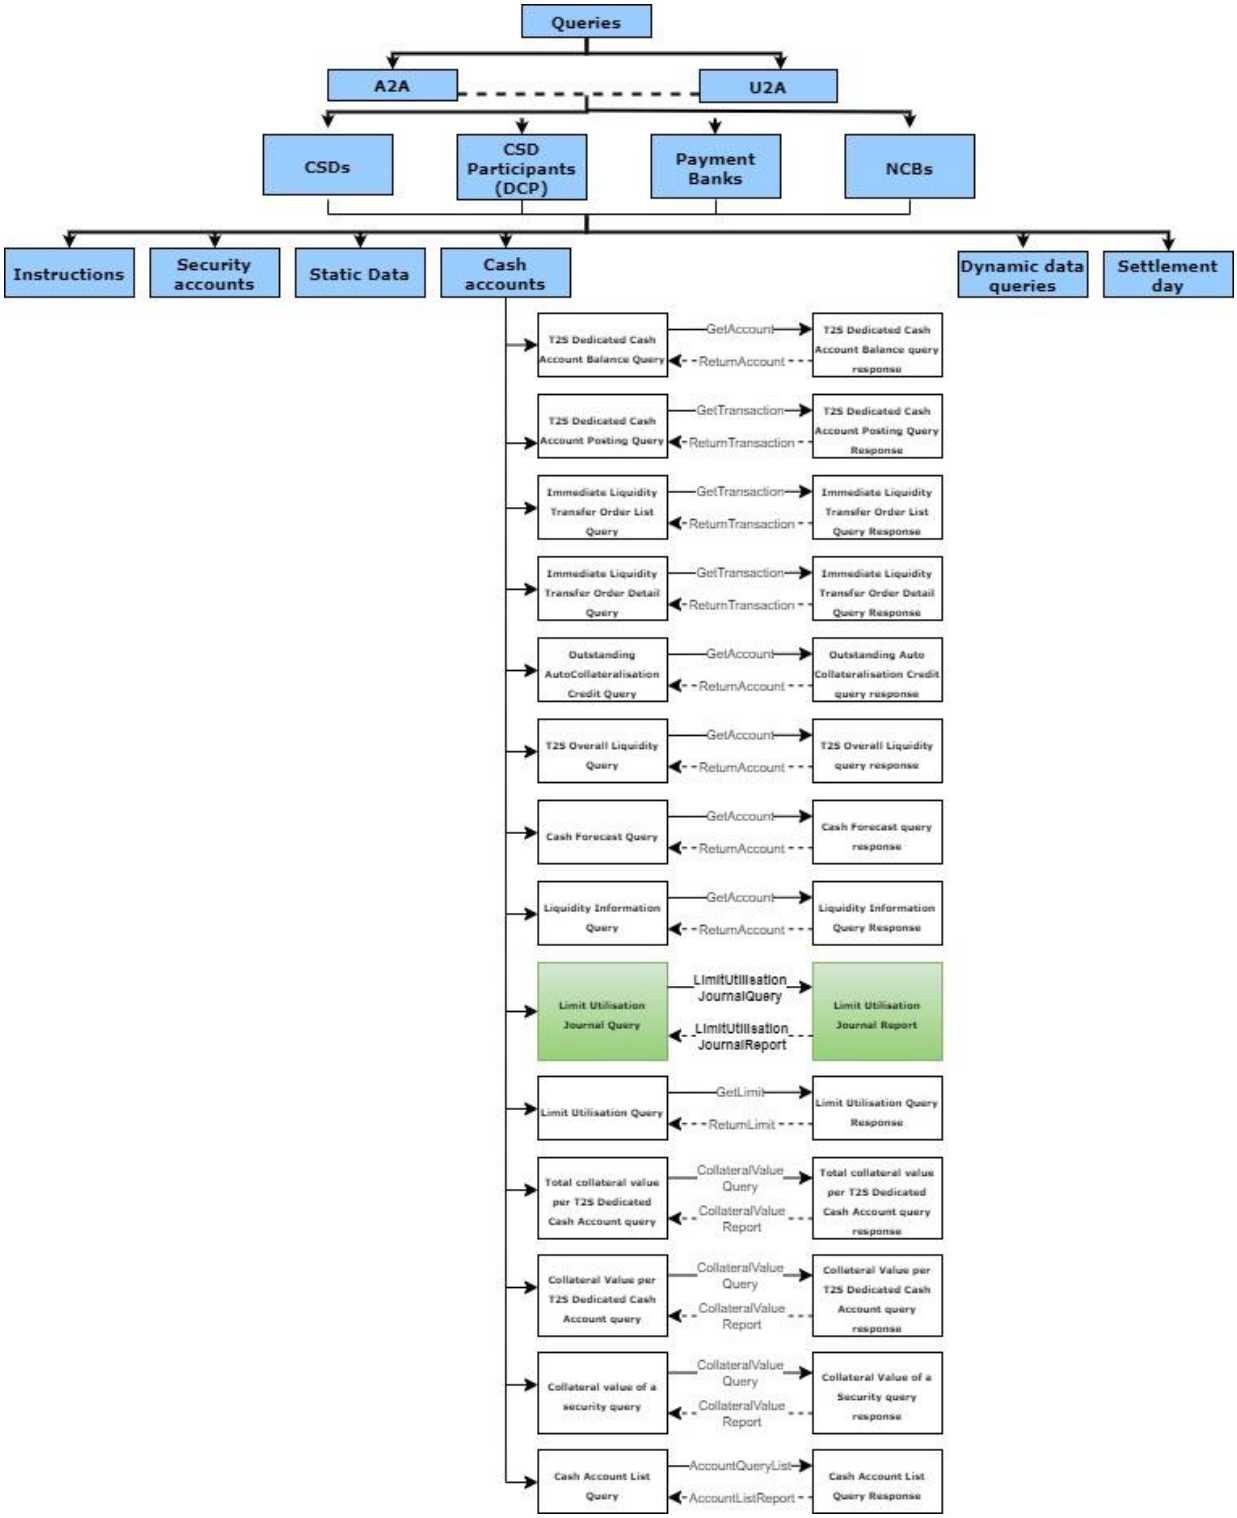

BusinessRole	Instructing Party	Executing/Servicing Party
Settlement Infrastructure		X
Central Securities Depositories (CSD)	X	
Direct Connected Participant (DCP)	X	
National Central Bank (NCB)	X	
Payment Bank	X	
Central Counterparty	X	
T2S Operator	X	

4 BusinessProcess Description

The subsequent diagram shows the high level business processes covered by the T2S project concerning Limit Utilisation. However the Limit Utilisation Journaling Query and Limit Utilisation Journaling Report only covers the reporting processes in green. The other processes are included for completeness.

The aim of the diagram below is to describe the high-level scope of “Limit Utilisation Journal Query Report” and the main processes are highlighted within the green boxes.

Query Report Process

Item	Description
Definition	The instructing party requests a journaling of limit utilisation with selected criteria, from the executing party who replies with the limit activity within the settlement domain corresponding to the query criteria.
Trigger	The process is triggered either by the system through a scheduled event at the end of day or the sending of a query request by the Instructing Party.
Pre-conditions	Limits must exist to query within the scope of the Instructing Party.
Post-conditions	none
Role	• Instructing Party for the Query. • Executing/Servicing Party for the Report.

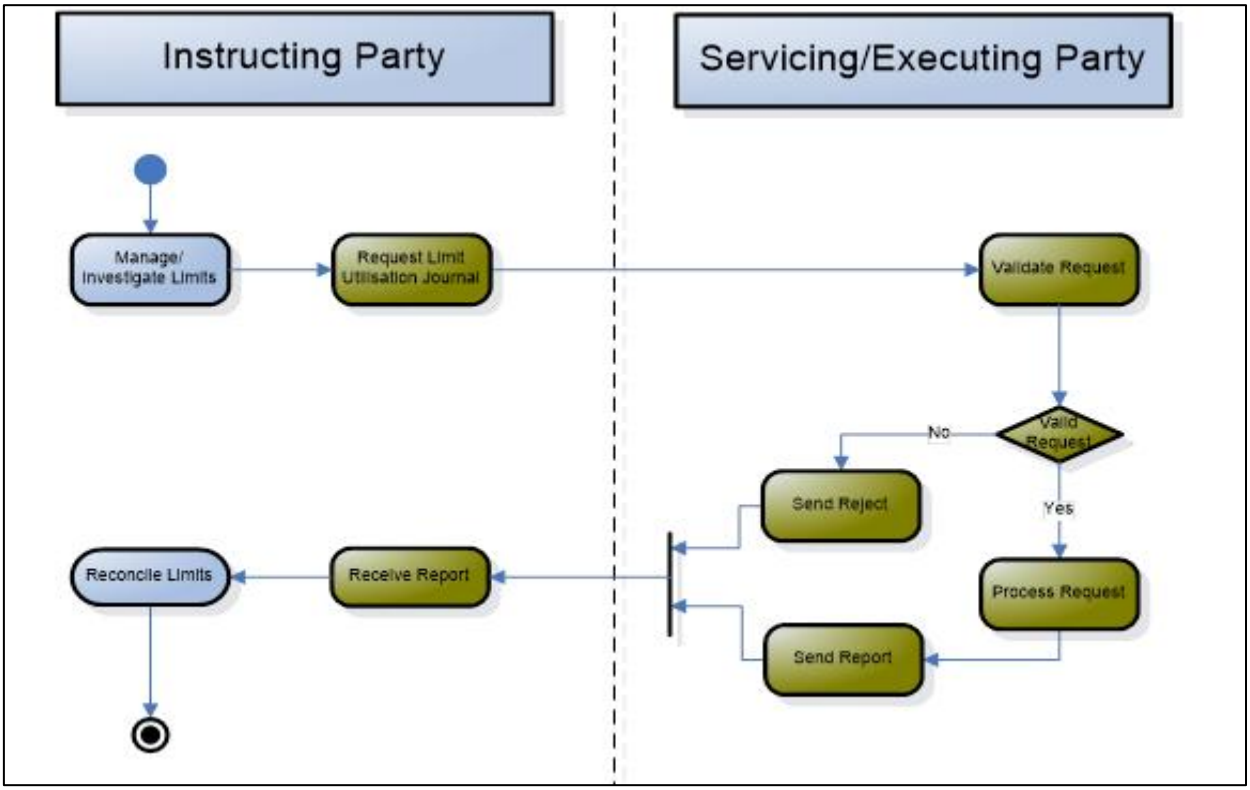

5 Description of BusinessActivities

For the BusinessActivities description of a Limit Utilisation Journal Reporting process, two activities can be described: a pull mode activity and a push mode activity.

- **Legend**

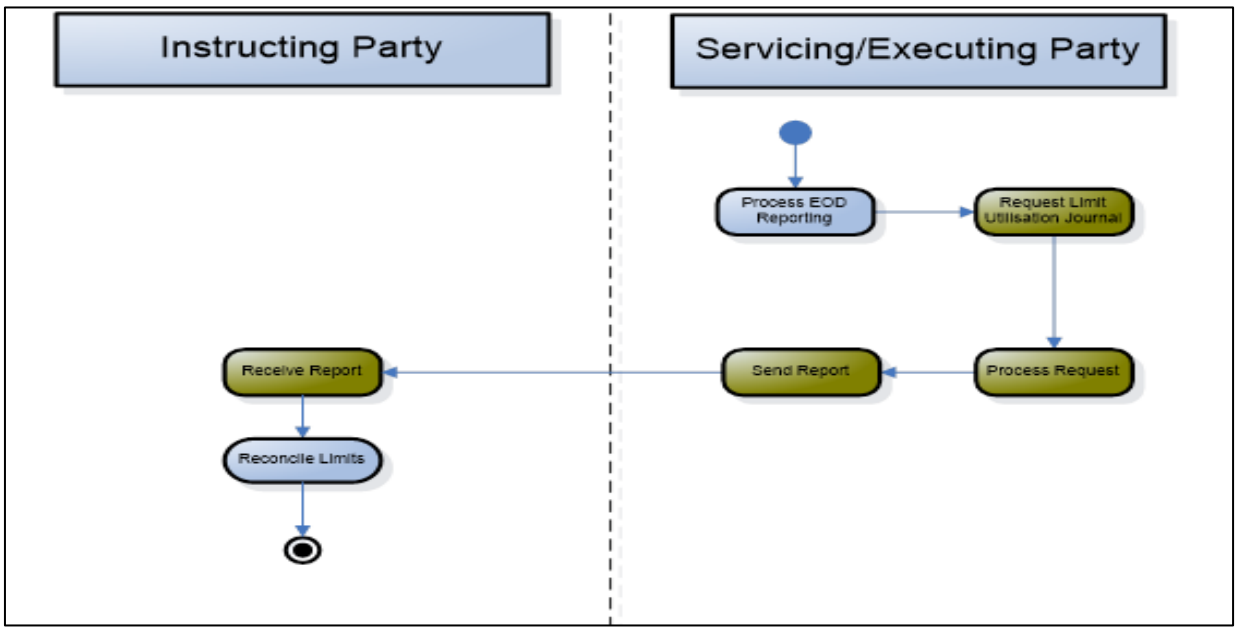

Symbol	Name	Definition
●	Start Point	Shows where the lifecycle of the business process commences.
◉	End Point	Shows where the lifecycle of the business process ends.
◇	Lozenge (or diamond)	Indicates that a choice between several actions can be made.
▬	Bar	Indicates that several actions are initiated in parallel.

5.1 Pull mode

Step	Description	Initiator
Request Limit Utilisation Journal	Send a query to the Executing/Servicing Party to request information regarding the limits as managed by the credit provider and corresponding to the criteria as defined within the message.	Instructing Party
Validate Request	Technical and business validation of the request before further processing or not. • If Yes, i.e., the request is valid, go to the **Process Request**. • If No, the **Send Reject** is triggered.	Executing/Servicing Party (T2S in this case)
Send Reject	Generate a report and route it to the communication layer to inform the Instructing Party that the Request is rejected with a specification of the operational error resulting from the validation of a request.	Executing/Servicing Party (T2S in this case)
Process Request	Generate a report providing information regarding the limits as managed by the credit provider and corresponding to the criteria received within the incoming query message and trigger the **Send Report**.	Executing/Servicing Party (T2S in this case)
Send Report	Route a report to the communication layer.	Executing/Servicing Party (T2S in this case)
Receive Report	Go to the requested reporting activity.	Instructing Party

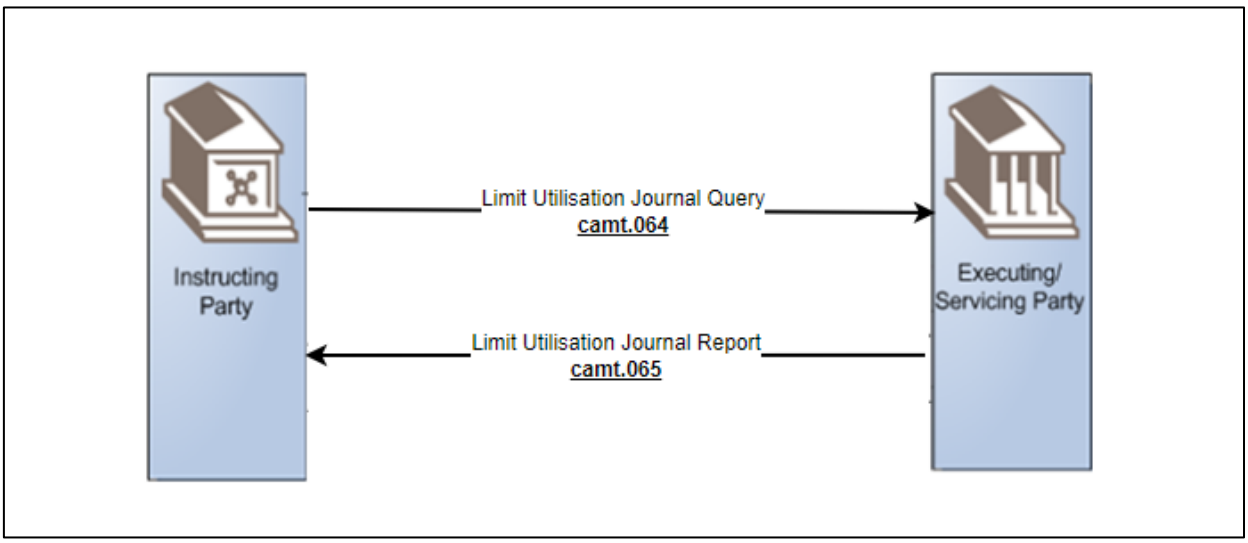

5.2 Push mode

Step	Description	Initiator
Request Limit Utilisation Journal	Requests reports as part of end of day report management events.	Executing/Servicing Party (T2S in this case)
Process Request	Generate a report providing information regarding the limits as managed by the credit provider and trigger the **Send Report**.	Executing/Servicing Party (T2S in this case)
Send Report	Route a report to the communication layer.	Executing/Servicing Party (T2S in this case)
Receive Report	Go to the requested reporting activity.	Instructing Party (Subscriber to receive the report)

6 BusinessTransactions

This section describes the message flows based on the activity diagrams documented above. It shows the typical exchanges of information in the context of a BusinessTransaction.

6.1 Limit Utilisation Journal Query

A CSD, NCB, payment bank or a directly connected system participant (the central securities depository participant granted direct access, like a bank or a central counterparty) sends a Limit Utilisation Journal Query via camt.064 to the central system (e.g. T2S in this case). Its purpose is to query information regarding the journal of transaction impacting the utilisation of limits that have been defined by the system participant.

6.2 Limit Utilisation Journal Report

The LimitUtilisationJournalReport message (camt.065) is exchanged between the central system, (e.g. T2S in this case) and a CSD, NCB, payment bank or a directly connected system party (the central securities depository participant granted direct access, like a bank or central counterparty). It is used to return information about the limit amounts, utilisation and journal of transactions impacting the utilisation of limits. Its purpose is to report information regarding the limits as managed by the credit provider and corresponding to the criteria received within the incoming query message (camt.064).

7 Business Examples

This section describes business examples of the use of the various candidate Message Definitions for the Limit Utilisation Journal Query and Report message set. All XML instances are embedded in the BAH, but the XML message instance provided below does only show the content of the pure business message.

In the business context, we can distinguish two possible scenarios for Limit Utilisation Journal Query and Report:

- Business Report.
- Operational Errors.

7.1 Example #1: Business Report

7.1.1 Description

In this example the “LimitUtilisationJournalQuery” is used by an NCB (A) "CBAABIC1XXX”, participating in T2S, to query via camt.064 the journal utilisation of Auto-collateralisation limits for the payment bank “PAYBKBICXXX” on January 9th, 2015, as the current business date, *which corresponds to Limit Utilisation activity date*.

The result of this query is sent using “LimitUtilisationJournalReport” (camt.065) containing the Auto-collateralisation limit, associated limit information and corresponding journal transaction activity of the utilisation of the limit for the bank linked to the Dedicated Cash Account identified by “9000000123”.
In this example, the following limit information is returned:

- Limit Amount: 100000 Euros;
- Utilisation: 40000 Euros;
- Available: 60000 Euros;
- Journal Activity :
    - 15000 Euros Debit for Entry Reference T2SREF1234
    - 12000 Euros Debit for Entry Reference T2SREF2345
    - 13000 Euros Debit for Entry Reference T2SREF3456

7.2 Example #2: Operational Errors

7.2.1 Description

In this example the “LimitUtilisationJournalQuery” is used by an NCB (H) "CBHHBIC2XXX”, participating in T2S, to query via camt.064 the journal utilisation of Auto-collateralisation limits for the payment bank “PBKHBIC0XXX” on January 9th, 2015 *with Limit Utilisation activity date in the future*.

The result of this query is sent using “LimitUtilisationJournalReport” (camt.065) specifying the operational error resulting from the processing of this request.
In this example, the Error Code “Q065” is returned with the corresponding Error description.
