ISO 20022

Target2-Securities – Securities and Penalty Reporting

Message Definition Report Part 1

Approved by the Securities SEG on 19 February 2026.

This document provides information about the use of the messages for Target2-Securities – Securities Reporting and includes, for example, business transactions and messages flows.

March 2026

Preliminary Note

The Message Definition Report (MDR) is made of three parts:

MDR Part 1

This describes the contextual background required to understand the functionality of the proposed message set. Part 1 is produced by the submitting organization that developed or maintained the message set in line with an MDR Part 1 template provided by the ISO 20022 Registration Authority (RA) on www.iso20022.org.

MDR Part 2

This is the detailed description of each message definition of the message set. Part 2 is produced by the RA using the model developed by the submitting organization.

MDR Part 3

This is an extract if the ISO 20022 Business Model describing the business concepts used in the message set. Part 2 is an Excel document produced by the RA.

1 Introduction

1.1 Terms and Definitions

The following terms are reserved words defined in ISO 20022 Edition 2013 – Part1. When used in this document, the UpperCamelCase notation is followed.

Term	Definition
BusinessRole	Functional role-played by a business actor in a particular BusinessProcess or BusinessTransaction.
Participant	Involvement of a BusinessRole in a BusinessTransaction.
BusinessProcess	Definition of the business activities undertaken by BusinessRoles within a BusinessArea whereby each BusinessProcess fulfils one type of business activity and whereby a BusinessProcess may include and extend other BusinessProcesses.
BusinessTransaction	Particular solution that meets the communication requirements and the interaction requirements of a particular BusinessProcess and BusinessArea.
MessageDefinition	Formal description of the structure of a message instance.

Note When a MessageDefinition or message identifier is specified, it should include the variant and version number. However, in this document (except in the business examples section, if present), variant and version numbers are not included. In order to know the correct variant and version number for a MessageDefinition, the related Message Definition Report Part 2 document should be consulted.

1.2 Abbreviations and Acronyms

The following is a list of abbreviations and acronyms used in the document.

Abbreviation/Acronyms	Definition
4CB	Banca d'Italia, Banque de France, Deutsche Bundesbank and Banco d'España
A2A	Application-to-Application mode. Defines a mode of technical communication that permits the exchange of information between software applications of T2S and a directly connected T2S actor.
BAH/head.001	Business Application Header
BIC	Business Identifier Code
CeBM	Central Bank Money
CSD	Central Securities Depository
ID	Identification
MDR	Message Definition Report
NCB	National Central Bank
RTGS	Real-time gross settlement (RTGS) system. A settlement system in which processing and settlement take place in real-time on a gross basis.

Abbreviation/Acronyms	Definition
SEG	Standards Evaluation Group
T2S	TARGET2-Securities
TM	Technical Message. Messages which cover technical functions within T2S System
U2A	User-to-Application mode. Defines a mode of technical communication that permits the exchange of information between software applications of T2S and a T2S system user through a graphical user interface (GUI).
URD	T2S User Requirement Document
XML	eXtensible Mark-up language

1.3 Document Scope and Objectives

This document is the first part of the Message Definition Report (MDR) that describes the BusinessTransactions and underlying message set. For the sake of completeness, the document may also describe BusinessActivities that are not in the scope of the business processes covered in this document.

This document describes the following:

- the BusinessProcess scope
- the BusinessRoles involved in these BusinessProcesses

The main objectives of this document are as follows:

- to provide information about the messages that support the business processes
- to explain the BusinessProcesses and BusinessActivities these messages have addressed
- to give a high level description of BusinessProcesses and the associated BusinessRoles
- to document the BusinessTransactions
- to provide business examples

The messages definitions are specified in Message Definition Report Part 2.

2 Scope and Functionality

2.1 Background

This Message Definition Report covers a set of five MessageDefinitions developed by Banco de España and Banque de France on behalf of 4CB in close collaboration with SWIFT, submitted by Deutsche Bundesbank on behalf of 4CB and approved by Securities Standards Evaluation Groups (SEG) on 19 February 2026.

Originally, these messages have been designed to support the T2S community with retrieving securities settlement and securities position related information from the platform. T2S (TARGET2-Securities) is a European securities settlement engine which offers centralised settlement in central bank money across all European securities markets. The fundamental objective of T2S is to integrate and harmonise the highly fragmented securities settlement infrastructure in Europe. It aims to reduce the costs of cross-border securities settlement and increase competition and choice among providers of post-trading services in Europe.

The detailed description of each MessageDefinition is provided in Message Definition Report Part 2.

2.2 Scope

2.2.1 Securities Account Position Query and Securities Account Position Response

The scope of the Securities Account Position Query and Securities Account Position Response is supported by the following messages:

- semt.025: Securities Account Position Query.
- semt.040: Securities Account Position Response.

The communication flow can be represented as follows:

The Securities Account Position Query message gives the possibility to a CSD or a directly connected T2S party to query to the T2S platform (Servicing Party) for Securities Account Positions satisfying a set of criteria and possibly a corresponding date range period.

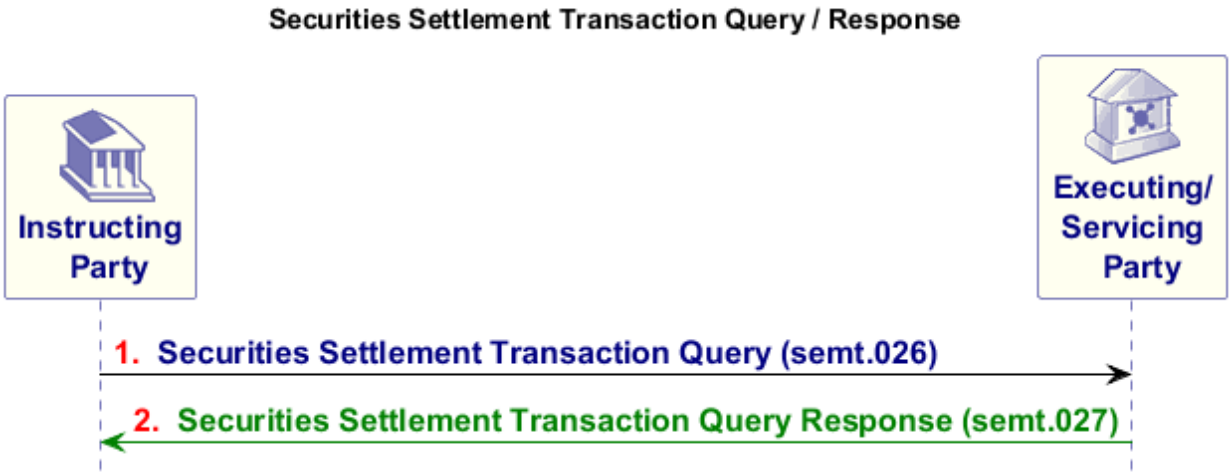

The T2S platform will return in response to the Securities Account Position Query the Securities Account Position Response message reporting the securities positions for the given date period as requested within the query, for all securities across all accounts satisfying the query criteria.

2.2.2 Securities Settlement Transaction Query and Securities Settlement Transaction Query Response

The scope of the Securities Settlement Transaction Query and Securities Settlement Transaction Query Response is supported by the following messages:

- semt.026: Securities Settlement Transaction Query.
- semt.027: Securities Settlement Transaction Query Response.

The communication flow can be represented as follows:

The Securities Settlement Transaction Query message allows Central Securities Depositories or directly connected T2S participants acting as the instruction party to query all settlement instructions satisfying a set of criteria and which covers several message usages depending on the type of query:

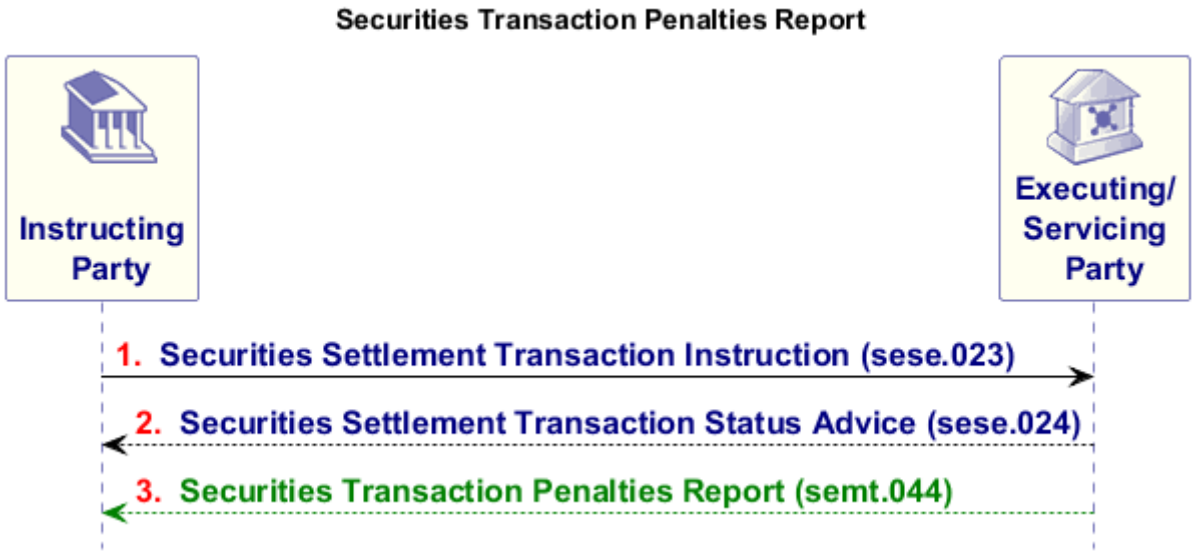

- Settlement Instruction Query (corresponding query type - 'Instruction').
- Settlement Instruction Current Status Query (corresponding query type - 'Status').
- Settlement Instruction Status Audit Trail Query (corresponding query type - 'Status Period').

The T2S platform acting as the Settlement Infrastructure will return in response to the Securities Settlement Transaction Query message the Securities Settlement Transaction Query Response providing all current attributes and latest statuses for all settlement instructions as selected in the search criteria defined in the query message.

2.2.3 Securities Transaction Penalties Report

The scope of the Securities Transaction Penalties Report is supported by the semt.044 message.

The communication flow can be represented as follows:

The Securities Transaction Penalties report message is specifically designed to support the provision of information to T2S actors related to the cash penalties computed by T2S that are either imposed or credited to those actors or their participants. On a daily basis, T2S shall compute cash penalties for settlement instructions which have not been settled after their intended settlement date.

Additionally, this message also supports the reporting of cash penalties that have been modified since its first calculation in T2S by a CSD or recalculated by T2S due to several circumstances like changes in the penalty rates to be applied or the valuation of the ISIN of the settlement instructions related to the penalty.

Note	These messages are to be used with the ISO 20022 Business Application Header (head.001). The schema and more information about the Business Application Header (BAH) can be found on the www.iso20022.org web site

2.2.4 Groups

Settlement Queries Responses Reports message set consists of:

MessageDefinition	Message Identifier
Securities Account Position Query	semt.025
Securities Settlement Transaction Query	semt.026
Securities Settlement Transaction Query Response	semt.027
Securities Account Position Response	semt.040

MessageDefinition	Message Identifier
Securities Transaction Penalties Report	semt.044

2.2.5 Functionality

This section provides for an overview of the functionality of each message in the scope of this submission, See Message Definition Report Part 2 for the message definitions and formats.

The Settlement Queries Responses and Report message definitions are specifically designed to support the following technical functions:

1. Securities Account Position Query (semt.025)

The Securities Account Position Query provides CSDs and T2S participants with the functionality to query for the latest or historical data on balances in the Securities Accounts with multiple criteria and, in some cases, satisfying multiple values or range of values.

The Securities Account Position Query message is composed of the following message building blocks.

- ***Statement***

This building block is mandatory and defines the criteria used to report on the securities account position allowing to choose for the latest or historical data.

- ***SearchCriteria***

This building block is mandatory and provides the criteria to extract the securities account position result set.

In response to the Securities Account Position Query T2S sends a Securities Account Position Response message (semt.040) with the corresponding Securities Account position details matching the criteria as defined within the query.

2. Securities Settlement Transaction Query (semt.026)

The Securities Settlement Transaction Query message is sent by a Central Securities Depository or a Directly Connected T2S Participant (e.g. payment bank/settlement bank) to T2S to query for information on securities settlement instructions with multiple criteria and, in some cases, satisfying multiple values or range of values.

This message is composed of the following message building block:

- ***Query Definition***

This building block is mandatory and non-repetitive. It contains the definition of the securities settlement instruction query criteria by using the following two block elements:

- Query Type
  This block element is mandatory and non-repetitive. It defines the type of query and whether the expected query response is related to an Instruction, Status or Status Period query.

- Search Criteria
  This block element is mandatory and non-repetitive. It defines the criteria to extract the securities settlement instruction information.

The Securities Settlement Transaction Query message covers the following T2S message usages:

- ***Settlement Instruction Query (corresponding query type – 'Instruction [INST]')***

This query type enables the sender to query for information on the details of specific securities settlement instructions by specifying the pertinent criteria allowed from the list of business attributes within [Search Criteria] block element.

To query for securities settlement instruction information, the element [Query Type] must be filled with the code "INST" [Instruction].

Search Criteria Status may be present (optional) when using this query type.

- ***Settlement Instruction Current Status Query (corresponding query type – 'Status [STTS]')***

This query type enables the sender to query for information on the details of specific securities settlement instructions satisfying the defined combination of current business processing statuses by specifying:

- Status Type (e.g. matching status, settlement status).
- Status value (e.g. matched or unmatched for matching status and pending or failing for settlement status).

All securities settlement instructions satisfying the provided criteria and with a current status matching the status criteria provided are returned.

To query a securities settlement instruction current status query the element [Query Type] must be filled with the code "STTS" [Status].

Search Criteria Status/Type must be present (mandatory) when using this query type.

- ***Settlement Instruction Status Audit Trail Query (corresponding query type – 'Status Period [STPD]')***

This query type enables the sender to query for information on the details of specific settlement instructions satisfying specific statuses for a given period.

To query a settlement instruction status audit trail query the element [Query Type] must be filled with the code "STPD" [Status Period].

Search Criteria Status/Type and Status/DatePeriod must be present (mandatory) when using this query type.

All instructions satisfying the provided criteria and with the status matching the status criteria during the specified period provided are returned.

In response to the Securities Settlement Transaction Query message, T2S sends a Securities Settlement Transaction Query Response message (semt.027) with the corresponding requested securities settlement instructions based on the criteria as defined within the query message.

3. Securities Settlement Transaction Query Response (semt.027)

The Securities Settlement Transaction Query Response message is sent by T2S to a Central Securities Depository or a directly connected T2S participant (e.g. payment bank/settlement bank).

This message is used to provide information on securities settlement instructions, as selected in the search criteria defined in the query message (semt.026).

The Securities Settlement Transaction Query Response is composed of the following message building blocks:

- ***Pagination***

This block element is mandatory and non-repetitive. It contains information about pagination of the report.

- ***ReportGeneralDetails***

This block element is mandatory and non-repetitive. It contains general characteristics related to the report information.

- ***Transactions***

This block element is optional and repetitive. It contains the specific transactions corresponding to the criteria of the query.

The Securities Settlement Transaction Query Response message covers the following T2S message usages:

- ***Settlement Instruction Query Response (corresponding query type – 'Instruction [INST]')***

This message usage provides details regarding the securities settlement instructions satisfying the query criteria of the corresponding settlement instruction query message.

To indicate a settlement instruction query response the element [Query Type] within the block element [Report General Details] is filled with the code "INST" [Instruction].

The element [Status And Reason] within the block element [Transactions] must not be present when using this query type.

- ***Settlement Instruction Current Status Query Response (corresponding query type – 'Status [STTS]')***

This message usage provides details regarding the securities settlement instructions satisfying the query criteria of the corresponding settlement instruction current status query message.

To indicate a settlement instruction current status query response the element [Query Type] within the block element [Report General Details] is filled with the code "STTS" [Status].

The element [Status And Reason] within the block element [Transactions] is present when using this query type.

- ***Settlement Instruction Status Audit Trail Query Response (corresponding query type – 'Status Period [STPD]')***

This message usage provides details regarding the securities settlement instructions satisfying the query criteria of the corresponding settlement instruction status audit trail query message.

To indicate a settlement instruction status audit trail query response the element [Query Type] within the block element [Report General Details] is filled with the code "STPD" [Status Period].

The element [Status And Reason] within the block element [Transactions] is present when using this query type.

4. Securities Account Position Response (semt.040)

The Securities Account Position Response message is sent by T2S to a CSD or any party authorised by them as response for the Securities Account Position Query message.

The Securities Account Position Response provides information about the different securities positions of a T2S Actor's securities account(s) in T2S.

Depending on the search criteria of the Query, the response provides:

- The current position.
- The position at a specific time of the current day.

- The closing position for a specific day in the past.
- The closing positions for a period of days in the past.

The Securities Account Position Response message is composed of the following message building blocks:

- ***Pagination***

This building block is mandatory and non-repetitive. It defines the pagination of the message.

- ***ReportGeneralDetails***

This building blocks is mandatory and non-repetitive. It specifies general information related to response such as the query reference, the activity or whether the data is either historical or current.

- ***AccountOwner***

This block is optional and non-repetitive. It identifies the party who owns the account.

- ***AccountServicer***

This block is optional and identifies the party that manages the account on behalf of the account owner, i.e. manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account.

- ***Balance***

This building block is optional and repetitive. This block provides the net position of a segregated holding, in a single security, within the overall position held in a set of securities accounts.

5. Securities Transaction Penalties Report (semt.044)

The Securities Transaction Penalties Report message definition is specifically designed to support the technical functions depending on the following message usages:

1) ***Daily cash penalty list Report***. This report is sent to actors to inform about the cash penalties computed for a given business day. In case of a CSD, the information shall include the cash penalties that are either imposed or credited to all of its participants. In case the actor is a CSD participant, the information shall include the cash penalties that are either imposed or credited to the CSD participant itself.

2) ***List of modified penalties***. This report is sent to actors to inform about the modifications made in existing cash penalties that have occurred since the previous recalculation process. The possible modifications that may occur in a penalty, and hence reported in the List of Modified Penalties, are: whether a cash penalty has been removed, re-included, re-allocated or switched by a CSD or whether a cash penalty has been automatically updated after the recalculation of the penalty triggered by a change in the relevant reference data like the valuation of a certain ISIN or the penalty rate to be applied.

3) ***Monthly report of aggregated amounts of cash penalties*.** This report is sent to actors to inform about the aggregated amounts of the cash penalties computed for the business days of the previous month. Monthly report of aggregated amounts of cash penalties considers the last available value of the amount of each of the cash penalties to be aggregated, considering all the modifications performed on the cash penalties.

The Securities Transaction Penalties Report message is composed of the following message building blocks:

- ***Pagination***

This building block is mandatory (the pagination of the report is only allowed when agreed between the parties) and non-repetitive. It contains information about pagination of the report: Page number and Last Page Indicator.

- ***ReportGeneralDetails***

This building block is mandatory and non-repetitive. It contains general characteristics related to the report information.

- ***AccountServicer***

This block is mandatory and non-repetitive. It identifies the party that manages the account on behalf of the account owner, i.e. manages the registration and booking of entries on the account, calculates balances on the account and provides information about the account.

- ***Penalty***

This block is optional (provided Activity Indicator is TRUE) and repetitive. It contains detailed information related to the computed penalties.

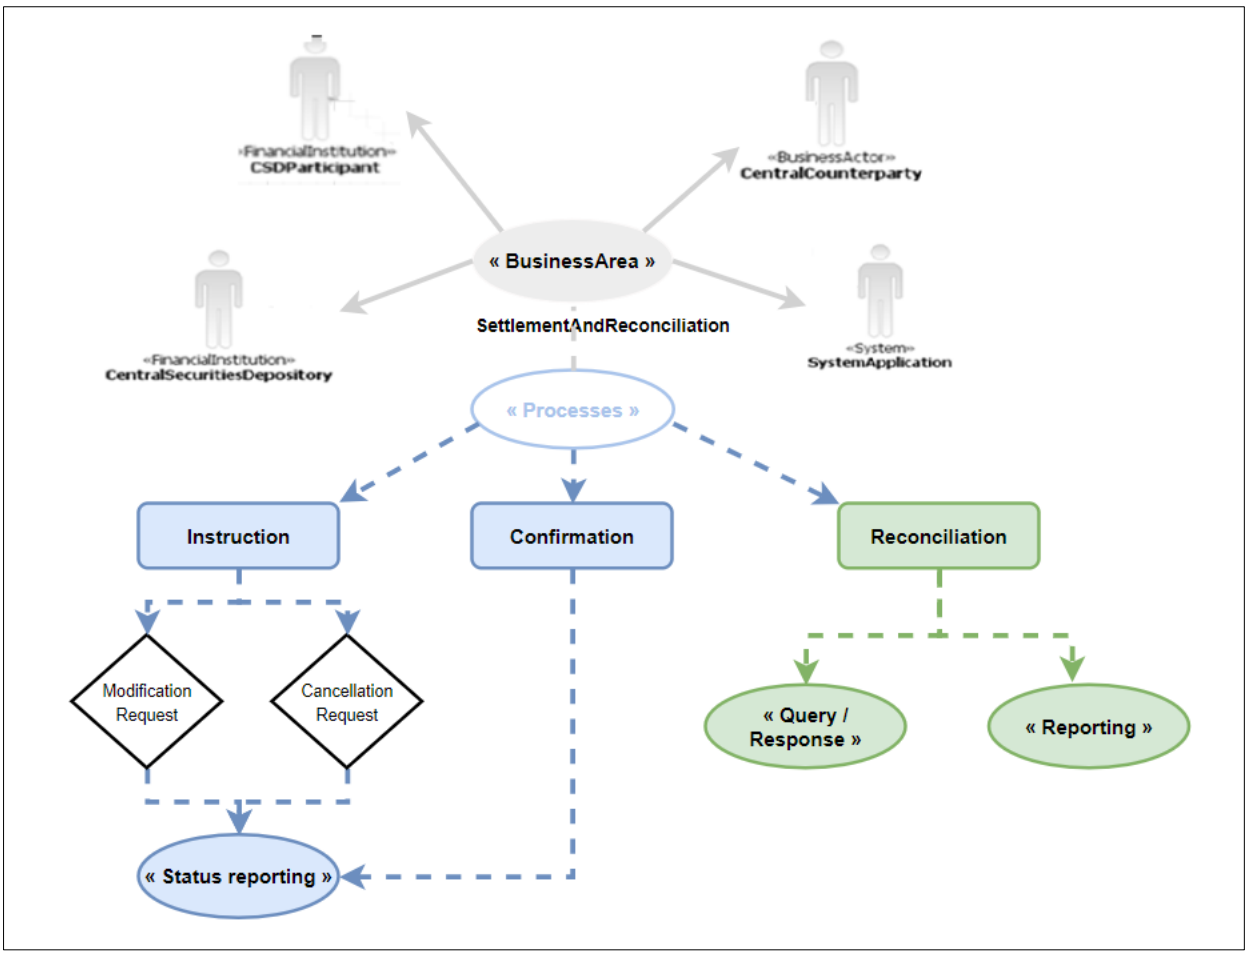

3 BusinessRoles and Participants

A BusinessRole represents an entity (or a class of entities) of the real world, physical or legal, a person, a group of persons, a corporation. Examples of BusinessRoles: “Financial Institution”, “Automated Clearing House”, “Central Securities Depository”.

A Participant is a functional role performed by a BusinessRole in a particular BusinessProcess or BusinessTransaction. Examples of Participants: the “user” of a system, “debtor”, “creditor”, “investor”.

The relationship between BusinessRoles and Participants is many-to-many. One BusinessRole can be involved as different Participants at different moments in time or at the same time. Examples of BusinessRoles: "user", "debtor”, "creditor", "investor". Different BusinessRoles can be involved as the same Participant.

In the context of the Securities Settlement, the high-level BusinessArea, Processes, BusinessRoles and typical Participants can be represented as follows:

The Settlement Queries Responses and Report message set only covers the reporting processes in green. The other processes are included for completeness.

3.1 Participants and BusinessRoles Definitions

Participants

Description	Definition
Instructing Party	Party that instructs the executing/servicing party to process and monitor a transaction.
Executing / Servicing Party	Party that processes, monitors and reports on transactions received from the Instructing party.

Business Roles

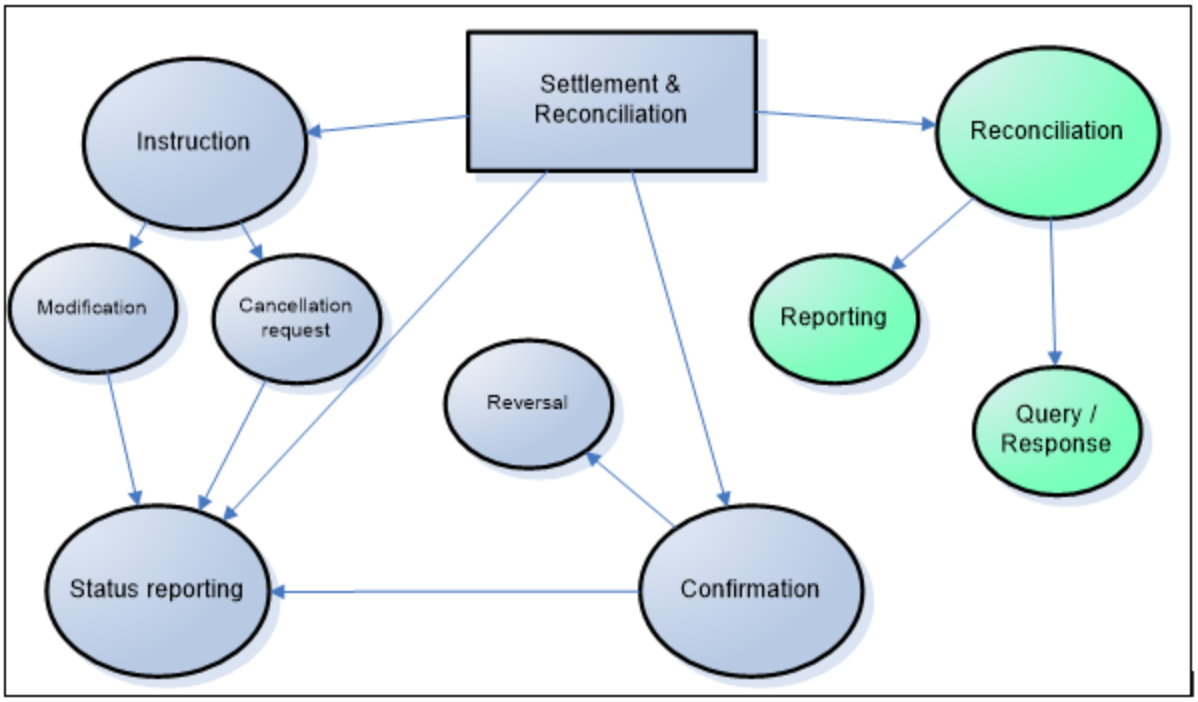

Description	Definition
Settlement Infrastructure	The party that provides services to its members for the settlement of transactions and holding of assets (e.g., T2S, RTGS).
Central Securities Depositories (CSD)	An infrastructure that, holds or controls, the holding of physical or dematerialised financial instruments belonging to all, or a large portion of, the investors in a securities market. This affects the centralised transfer of ownership of such securities by entries on its books and records.
Direct Connected Participant (DCP)	The party, which is not a CSD and that, is directly connected to the Settlement Infrastructure Platform. It could be a local custodian, a global custodian, a stock exchange , a central counterparty, etc.
Central Counterparty	An infrastructure that is very often a component of a clearinghouse, and facilitates clearing and settlement for its members by standing between the buyer and the seller of a trade. It may net transactions, and substitutes itself as settlement counterparty to each position.
T2S Operator	The T2S operator is the top level of the hierarchical role and access rights model. The T2S operator role classification includes all T2S system users of the entity, which will be responsible for the day-to-day operation and management of T2S. The T2S actors managed by this entity shall be CSDs and NCBs participating in T2S. At the highest level, the T2S operator shall have access to all data and functionality in the subordinate level.

3.2 BusinessRoles and Participants Table

BusinessRole	Instructing Party	Executing/Servicing Party
Settlement Infrastructure		X
Central Securities Depositories (CSD)	X	
Direct Connected Participant (DCP)	X	
Central Counterparty	X	
T2S Operator	X	

4 BusinessProcess Description

This diagram represents the high level BusinessProcesses. The main processes are highlighted in green, the surrounding processes in blue.

Query Report Process

Item	Description
Definition	The process provides responses to queries regarding Settlement instructions previously sent, Securities Account Balances and Penalties computed due to Settlement failures and allows the sending of reconciliation results via query responses or via reporting.
Trigger	The process is triggered either by the system through a scheduled event in case of reports or by the receipt of a query request sent by the Instructing Party.
Pre-conditions	The respective business object (i.e settlement Instructions, Securities Accounts, Penalties computed) must exist to query within the scope of the Instructing Party and which correspond to the criteria as defined within the query and report. The Instructing Party must hold necessary privileges within the Static Data configuration to receive reports.
Post-conditions	None
Role	Instructing Party for the query. Executing Party / Servicing Party for the query response and for reporting.

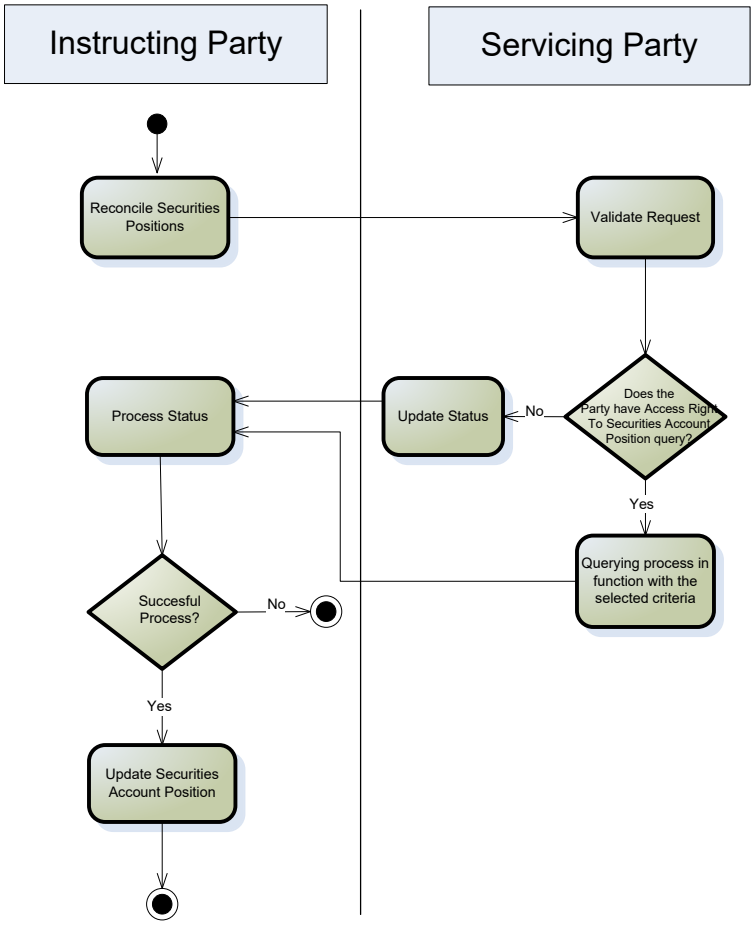

5 Description of BusinessActivities

This section presents the different BusinessActivities within each BusinessProcess. The BusinessActivities of a process are described with activity diagrams.

Legend

Symbol	Name	Definition
	Start Point	Shows where the lifecycle of the business process commences.
	End Point	Shows where the lifecycle of the business process ends.
	Lozenge (or diamond)	Indicates that a choice between several actions can be made.
	Bar	Indicates that several actions are initiated in parallel.

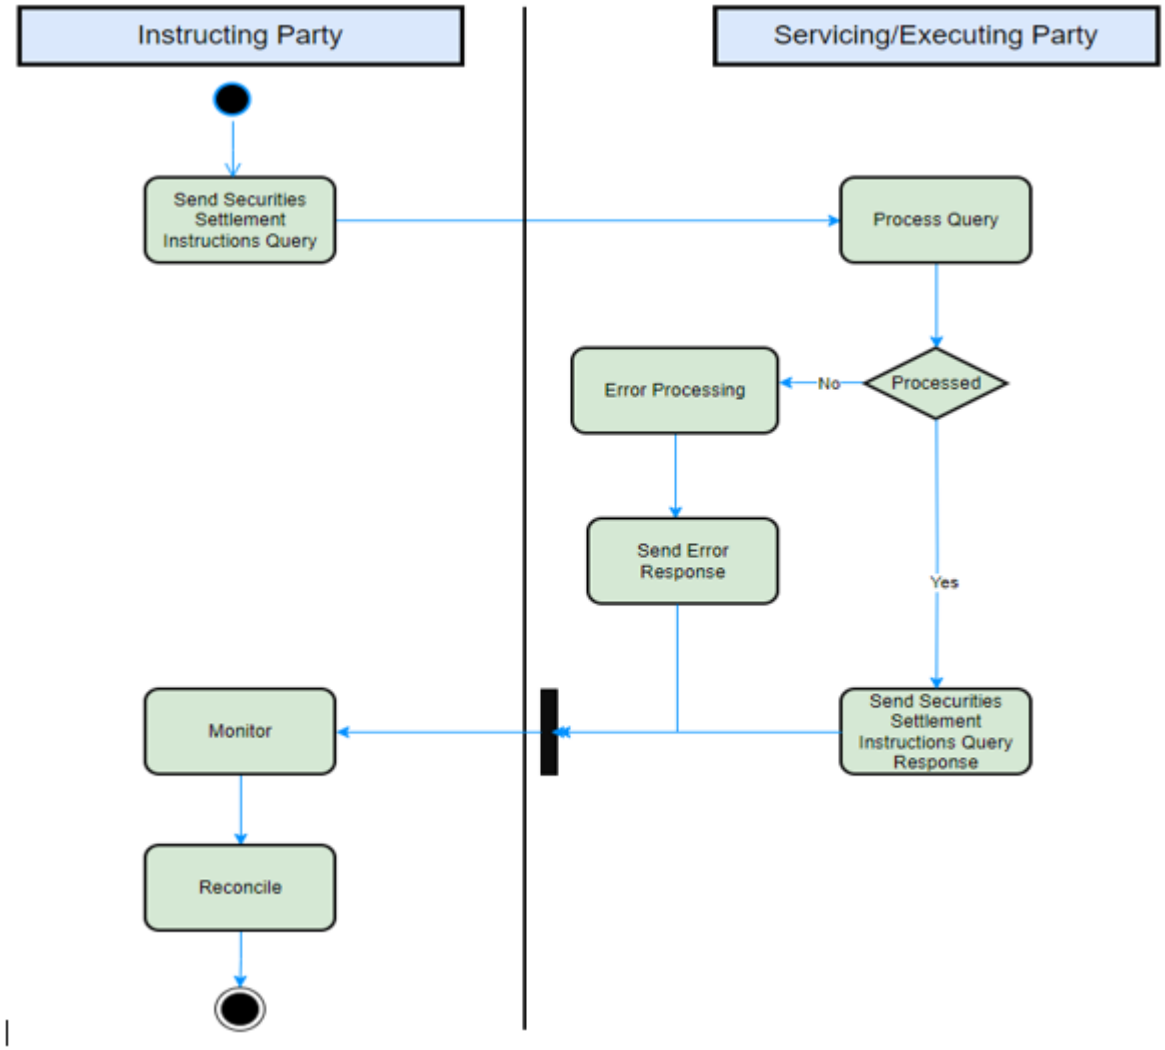

5.1.1 Securities Account Position Query and Securities Account Position Response

Step	Description	Initiator
Reconcile Securities Positions	Instructing Party sends a query to the Executing/Servicing Party to request details of the related securities positions.	Instructing Party
Validate Request	Technical and business validation of the query before further processing or not. • If Yes, i.e., the request is valid, go to Querying process based in the selected criteria. • If No, Update Status is triggered.	Servicing Party

Step	Description	Initiator
Update Status	Routes error response to communication layer	Servicing Party
Querying process based in the selected criteria	Retrieves the requested data and routes the response message to communication layer.	Servicing Party
Process Status	Check for incoming communications associated with original instruction and process its content.	Instructing Party
Update Securities Account Position	External process of reconciling based on the content of the message response to the original instruction.	Instructing Party

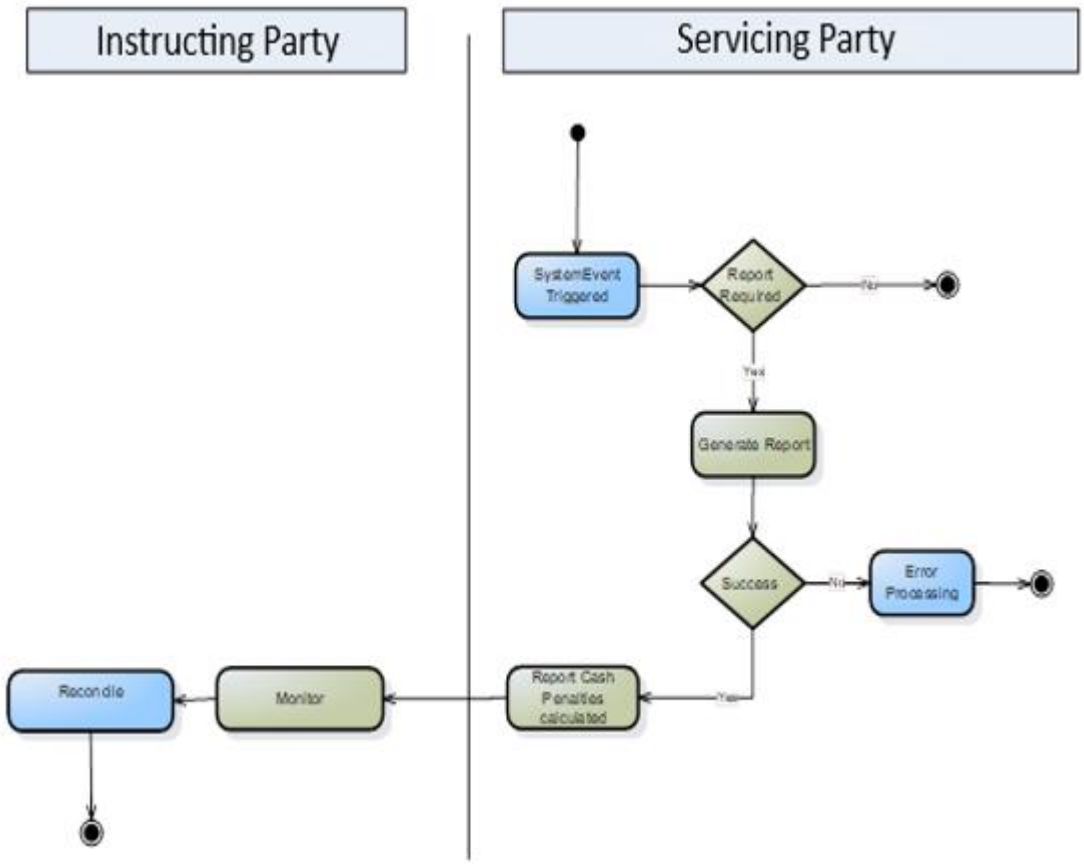

5.1.2 Securities Settlement Transaction Query and Securities Settlement Transaction Query Response

Step	Description	Initiator
Send Securities Settlement Instructions Query.	Instructing Party sends a query to the Executing/Servicing Party for querying all securities settlement instructions corresponding to the criteria as defined within the query message.	Instructing Party
Process Query.	Technical and business validation of the request query before further processing or not.	Executing/Servicing Party.

Step	Description	Initiator
	• If Yes, i.e., the request query is valid, go to **Send Securities Settlement Instructions Query Response**. • If No, **Error Processing** is triggered.	
Error Processing.	Adds operational errors to response before routing to **Send Error Response**.	Executing/Servicing Party.
Send Error Response.	Routes error response to communication layer.	Executing/Servicing Party.
Send Securities Settlement Instructions Query Response.	Routes response to communication layer.	Executing/Servicing Party.
Monitor.	Check for incoming communications associated with original instruction.	Instructing Party.
Reconcile.	External process reconciling impact of current status of original instruction.	Instructing Party.

5.1.3 Securities Transaction Penalties Report

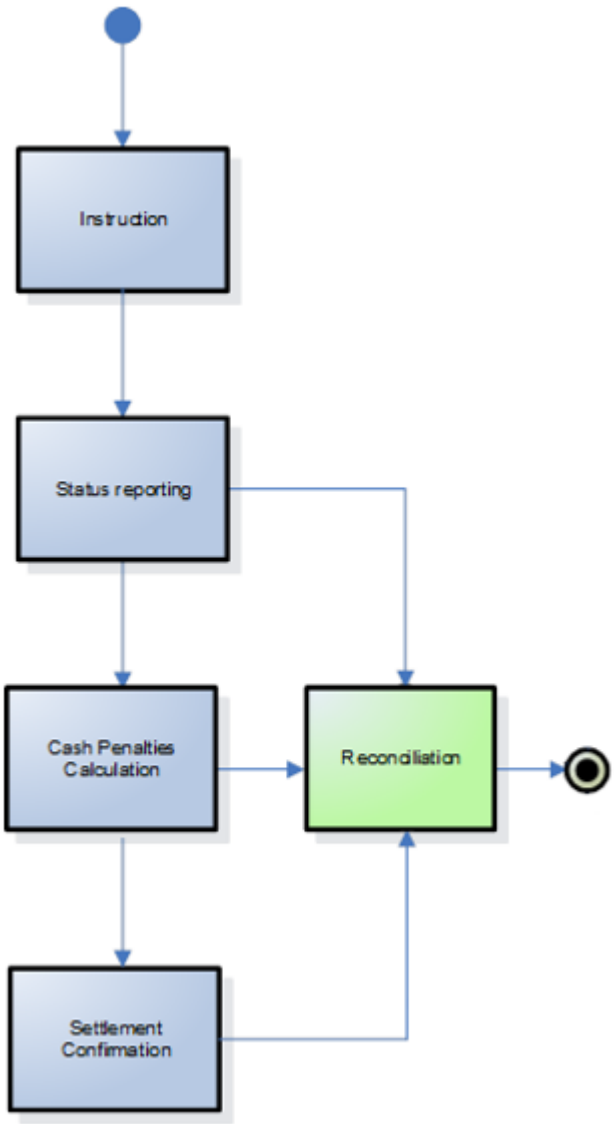

Step	Description	Initiator
Generate Report	System process that creates report from previously calculated cash penalties satisfying reporting criteria (i.e., business day, debtor, creditor…), assuming the Instructing Party has specified an interested in Receiving the Report.	Servicing Party
Report cash Penalties Calculated	Route the previously generated report to the communication layer	Servicing Party
Monitor	Check for incoming communications associated with the Report configuration previously introduced in the system.	Instructing Party
Reconcile	External process reconciling impact of the penalties computed on the Settlement instructions previously sent to the system.	Instructing Party

6 BusinessTransactions

This section describes the message flows based on the activity diagrams documented above. It shows the typical exchanges of information in the context of a Business Transaction.

In the context of a Business Transaction, the process enables the reconciliation of (pending and posted) transactions and their computed penalties (if any) by providing the associated data. The main processes are highlighted in green, the surrounding processes in blue.

The reconciliation communication flows can be represented as follows:

6.1 Securities Account Position Query (semt.025)

The Securities Account Position Query message returns the latest securities position at the given time of the day that the query has been requested for the specified securities accounts. In case the T2S Actor requests for a Securities Account Position History Query, he should indicate either the securities account or the account owner as search criteria. In a Securities Account Position History Query, T2S returns all closing securities positions on the dates within the specified time period for the specified securities accounts. In response to the Securities Account Position Query message, T2S sends a semt.040 message with the list of the different securities positions of a T2S Actor's securities account or a sese.022 message in case of error.

6.2 Securities Settlement Transaction Query (semt.026)

The Securities Settlement Transaction Query message is sent by a Central Securities Depository or a directly connected T2S participant (e.g. payment bank/settlement bank) to T2S. This message is used to request information on Settlement Instructions.
This message is sent to T2S for the following query types:

- Settlement Instruction Query.
- Settlement Instruction Current Status Query.
- Settlement Instruction Status Audit Trail Query.

In response to the Securities Settlement Transaction Query message, T2S sends a Securities Settlement Transaction Query Response message (semt.027) with the corresponding requested settlement instructions or a Securities Status Or Statement Query Status Advice message (sese.022) in the case of a business error.

6.3 Securities Settlement Transaction Query Response (semt.027)

The Securities Settlement Transaction Query Response message is sent by T2S to a Central Securities Depository or a directly connected T2S participant (e.g. payment bank/settlement bank). This message is used to provide information on Settlement Instructions based on the criteria as defined within the query message.

To request the Securities Settlement Transaction Query Response message, the sender sends a semt.026 message containing search criteria to restrict the query. This message is sent by T2S in the following message usages:

- Settlement Instruction Query Response.
- Settlement Instruction Current Status Query Response.
- Settlement Instruction Status Audit Trail Query Response.

6.4 Securities Account Position Response (semt.040)

The Securities Account Position Response message is sent by T2S to a CSD, or any party authorised by them, as response for the semt.025 message. The Securities Account Position Response provides information about the different securities positions of a T2S Actor’s securities account in T2S.

6.5 Securities Transaction Penalties Report (semt.044)

The Securities Transaction Penalties Report message is sent by T2S to T2S Actors, i.e. CSDs or CSD participants, to provide them with the Daily Penalty List, the List of Modified Penalties and the Monthly

Aggregated Amounts of penalties for the previous month. T2S shall allow the relevant T2S Actor to receive penalties information under its default data scope.

In case of a CSD, the information shall include the penalties that are either imposed or credited to all the parties belonging to the CSD data scope.

In case of a CSD participant (or an External CSD), the information shall include the penalties that are either imposed or credited to the CSD participant (or the External CSD).

7 Business Examples

This section describes business examples of the use of the various candidate Message Definitions for the Settlement Queries Responses Reports message set. All XML instances are embedded in the BAH, but the XML message instance provided below does only show the content of the pure business message.

7.1 Securities Account Position Query (semt.025)

Description

In this example a T2S Actor has sent to T2S a Securities Account Position Query requesting the current day positions related to the Restriction Type “BLK1” within its securities account “1000000123”.

Message Instance

            </SubBalTp>
            <RtrZeroPos>false</RtrZeroPos>
        </SchCrit>
    </SctiesAcctPosQry>
```

7.2 Securities Settlement Transaction Query (semt.026)

The Securities Settlement Transaction Query message covers the following T2S message usages:

- ***Query Type example: Settlement Instruction Query***

Description
In this example a T2S Actor has sent to T2S a Settlement Instruction Query requesting all settlement instructions where the securities account is '1000000123' and the settlement quantity is greater than or equal to 50000 units and less than or equal to 60000 units (as per a range of valid quantity values).

7.3 Securities Settlement Transaction Query Response (semt.027)

The Securities Settlement Transaction Query Response message covers the following T2S message usages depending on the [Query Type] defined in the query:

- ***Query Response Example: Settlement Instruction Query Response***

Description
In this example T2S sends a Settlement Instruction Query Response containing one instruction matching the query criteria corresponding to query reference ‘QRYREF0001’. This message is sent as a response to a Settlement Instruction Query requesting all settlement instructions where the securities account is ‘1000000123’ and the settlement quantity is greater than or equal to 50000 units and less than or equal to 60000 units.

7.4 Securities Account Position Response (semt.040)

Description

In this example T2S sends a Securities Account Position Response containing 3 restriction references matching the query criteria specified in the query with reference “MSG700”, which is requesting the current day positions related to the Restriction Type “BLK1” within securities account “1000000123”. The securities positions returned in respond to the query are the current day positions at 09:30:47 with the following details:

Securities account “1000000123” with 4000 “ISIN00000002” blocked (not available) at BLK1.

– 1000 units with restriction reference 98586776475.

– 1000 units with restriction reference 98745787450.

– 2000 units with restriction reference 1234767634.

7.5 Securities Transaction Penalties Report (semt.044)

Description

In this example, T2S sends a Securities Transaction Penalties Report, which content is a Daily Penalty List, to the CSD A (CSDABIC1XXX) to inform about all the penalties that were computed for the previous business date, June 21st, 2025 (Detection Date), and for which any participant of CSD A or the CSD A itself is either imposed with or entitled to receive the penalty. This Daily Penalty List is generated on June 24th, 2025, and includes information about 4 penalties within the scope of CSD A.
